ELEC2100   Signals and Systems

Course Description
This is a foundation course introducing signals and systems for modelling and analysis of a variety of engineering systems. The course covers continuous- and discrete-time Fourier analysis, Laplace Transform, interactions between signals and linear time invariant (LTI) systems, sampling theorem, differential and difference equations as LTI systems, and application examples in communications, control, and multimedia. MATLAB introduced as an integral part of this course.

Exclusion(s) : ELEC2100H
Prerequisite(s) : MATH2011 or MATH2023 or MATH2111 or MATH2350 or MATH2351 or MAT2352

List of Topics

1. Signals & Systems
2. Linear Time-Invariant Systems
3. Fourier Series Representation of Periodic Signals
4. Continuous-Time and Discrete-Time Fourier Transform
5. Sampling and Digital Processing of Signals
6. Differential Equations, Laplace Transform, and System Design
7. Communication and Control System Examples

Statement of Objectives/Outcomes

On successful completion of this course, students will be able to :

CO1 - Describe Basic Continuous Time and Discrete Time signals and different ways to make use of and manipulate them.

CO2 - List the Properties of LTI systems and to determine the output of an LTI system using the impulse response and the convolution sum/integral, and the frequency response and transform.

CO3 - Correctly apply the appropriate transform (FS, DTFS, FT, DTFT) to produce a Frequency domain representation for continuous-time/discrete-time and periodic/aperiodic signals, and relate basic operations in the time and frequency domains.

CO4 - State and prove the sampling theorem.

CO5 - Analyze differential and difference equations as causal LTI systems and to realize them in different block diagram forms.

CO6 - Apply theories learnt to the analysis of communication systems including Amplitude Modulation and Frequency Division Multiplexing, the communication channel, mechanical systems, and new problems.

CO7 - Use the Software Tools Matlab to manipulate, process, analyze and plot signals.

Relationship of Course to Program Outcomes

Please refer to the Report Section 4.3.3 (iii).

Grading Scheme

Proficiency Test on Complex Number	5%
Homework	18%
Laboratory exercises	12%
Midterm Examination	25%
Final Examination	35%
Matlab Written Test	5%
