

The Company

MeeOpp is an education technology startup building a cutting-edge personalised learning system for schools, students and teachers. Our goal is to maximise the potential of every student through the use of technology. We are rapidly expanding to meet demand and would be delighted to meet individuals who share our vision and enthusiasm.

Our passionate team combines expertise in the fields of education and technology, and aims to solve the biggest challenges that classrooms face in the 21st century.

Our pay is competitive with a potential performance bonus, and the job includes great perks: medical and dental benefits, paid time off, snacks, and team activities. Our office is just a five-minute walk from Central HK and two minutes from the Sheung Wan MTR station. We offer a great working environment, with a modern office space and an innovative work culture, with huge potential for career growth and career remuneration based on performance.

Summary:

As a fast-growing EdTech startup, we are looking for someone who can adapt quickly and take ownership of tasks at hand. With exciting growth opportunities ahead, we are looking for a passionate individual who is optimistic and ready to be a part of an expanding team.

For this role, we're looking with someone with several years of full-stack software development experience and a proven track record of building systems and shipping quality code. At MeeOpp, you will design solutions and features for our audience of students and teachers, and build infrastructure to improve internal systems and keep them healthy and secure.

Why you're a fit for the role:

- You have 5+ years of experience developing and releasing software, and understand what it takes to build systems from the ground up and maintain them at scale.
- You care about software quality and value automated testing, code reviews, and establishing coding standards.
- You enjoy solving difficult problems, evaluating trade-offs, and can take the lead in the technical design of solutions and new features.
- You're a team player who values a diverse set of opinions, and you enjoy both learning from and mentoring others.
- You're comfortable working in a fast-paced environment, deploying often, and managing competing priorities.

What you need:

- A strong grasp of modern JavaScript
- A deep understanding of at least one major web framework (Django, Rails, Express, etc.)
- Familiarity with React and Redux
- Experience using Git and working in a Unix-based environment

- Experience with automated software testing
- Familiarity with web security vulnerabilities and security best practices

Bonus points for:

- Experience with other technologies in our stack (MongoDB, Docker, NodeJS, Feathers.js, Redis)
- Experience with software deployment and configuring a CI/CD pipeline
- Experience working with a major cloud infrastructure provider (AWS, GCP, etc.)
- Experience with systems monitoring and working in a DevOps role
- Portfolio projects, contributions to open-source projects, or any other examples of your work you're able to share
- Experience or demonstrated passion in education technology

Language requirements:

- English fluency

Your benefits:

- Medical insurance
- Dental insurance
- Performance bonus
